

DynaStrip

MAKES YOUR WORK FLOW

UNSURPASSED FEATURES

- Ganging of jobs
- Advanced JDF capabilities and CIP4-certified
- Automatic color match
- Light-table interface
- Support for trapped PDF's
- Object oriented architecture
- Time saving and multi-sheet templates
- Plate setups for CTP
- TIFF preview

DynaStrip

DynaStrip is the new standard in imposition. Print professionals worldwide rely on DynaStrip for its superior imposition capabilities and unparalleled flexibility. DynaStrip integrates with all leading workflows and RIPs.

DynaStrip can handle all PDF, PostScript, EPS, DCS, ICF, PJTF and JDF files from over 100 applications, produce populated and non-populated impositions, and can output jobs to any printer, digital imaging device, image setter or plate setter.

Its powerful object-oriented architecture allows you to fully customize and control your imposition layout. Create and save basic templates, modify them on the fly for custom jobs and keep template creation and management to a minimum. Ganging of jobs provides an easy mean to maximize your press sheets and reduce waste. You can ensure imposition integrity with the help of DynaStrip's TIFF preview and direct-layout PDF.

DynaStrip Full and Compact

You can choose between DynaStrip Full and Compact. The compact version allows sheets up to 32" X 32" (810 mm X 810 mm) and is ideal for smaller printers. The full version has an unlimited sheet size.

Specialized versions

DynaStrip Automation Delivers the news

From newsroom to newsstand, every minute counts. DynaStrip Automation includes an **advanced page pairing module** that enables newspaper and magazine printers to efficiently manage and impose document files that arrive in different orders and at different times.

Hot folders

Create up to 200 hot folder-based setups to maximize the number of the jobs you can process at any given moment. Automatically output any complete flat to increase your productivity on tight deadlines. Effectively synchronize several imposition jobs at once and dispatch them to a variety of RIPs or output devices. Perform last-minute corrections and ensure top document quality by resending the corrected pages to the hot folder and reinitiating output.

DynaStrip Fusion The versioning tool

In the world of multilingual documents, catalogues and direct market publishing, DynaStrip Fusion eliminates the hassles and potential errors of managing several versions of the same document.

Versioning

DynaStrip Fusion's specialized versioning tool enables printers to quickly create up to 200 versions of the same imposed job based on one, unique template. Replace entire pages in a document with pages from another source, or swap specific contents by merging them with a standard background. Easily configure the version manager to output document versions at specific times and in specific sequences. You can even re-edit your versions on the fly and at the last minute for timely quality control.

DynaStrip Network Floating licenses edition

DynaStrip Network is a floating licenses edition, allowing customers to share DynaStrip on multiple client workstations.

One dongle, multiple workstations

From now on, by purchasing DynaStrip Network, printers are able to use the sophisticated application on multiple workstations. The dongle-protected application uses only one multiplatform dongle. A single HASP key, connected to any computer on your network, can provide up to 10 concurrent DynaStrip users depending on the package purchased. Being cross-platform, the dongle can be connected to any PC or Macintosh (OS X only) computer on the local area network.
